EDUCATION

Bachelor of Science in Computer Science

Expected December 2026

Florida International University (FIU); Miami, FL

- GPA: 3.75 (CS Coursework): 3.9 | Dean's List: Fall 2024, Fall/Spring 2025
- Coursework: Data Structures, Software Engineering 1, Computer Architecture, Systems Programming, Net-Centric Computing, Operating Systems, Artificial Intelligence, Machine Learning, Database Management

SKILLS

Programming Languages: Javascript, TypeScript, HTML, CSS, Java, C, Python, Golang, SQL

Frameworks/Libs: React.js, Next.js, Node.js, Express.js, FastAPI, RESTAPI, Django, Firebase, Google ADK, JavaFX, WebGPU, PIL

Developer Tools: Linux, Git, Docker, Vite, Vue, MongoDB, Manifest V3

WORK EXPERIENCE

Kasiopya.com | Miami, FL

July 2025 - Present

Shopify Developer

- Implementing custom features using Shopify's template language Liquid. Created custom templates for customized popups, photo displays/carousels, and product filtering

Florida International University | Miami, FL

August 2025 - Present

Teaching Assistant

- Coordinating with Professor Abdul Rehman for Software Engineering 1, Programming 1 and 2 lectures and exams

RedPeak - Redpeak.ai | Miami, FL

May 2025 - August 2025

Frontend Developer Intern

- Collaborated with the designer to create responsive React components using TypeScript and TailwindCSS
- Engineered all page animations and responsive UI elements, improving user experience to increase engagement
- Optimized core Python scripts, resolving prompt-content mismatch issues and increasing the overall relevance of generated books

PROJECTS

Miami-Dade Fire Rescue Live Dispatch Map | mdc-activecalls.onrender.com

February 2026 - Present

- Deployed a real-time emergency incident map scraping live MDC Fire Rescue and Highway Patrol data, visualizing 70+ active calls with filtering, and auto-refresh.
- Engineered a geocoding pipeline using Google Maps API backed by a persistent Turso SQLite cache, reducing ongoing API costs to near-zero.

BookmarkBuddy | github.com/izy138/BookmarkBuddy

March 2026 - Present

- Built a Chrome extension bookmark manager with card-grid UI, auto-categorization, favorites, duplicate detection, and bulk operations using Manifest V3, and Javascript.
- Integrated X/Twitter via content scripts for live bookmark capture and bulk post importing from both live page scraping and data archive files.

Relational Database Engine in Go

November 2025 - Present

- Designed a full relational database management system from scratch in Go.
- Implemented a storage engine, WAL, a SQL query parser, and B-tree indexing. Built core database operations (Create, Insert, Select, Update, Delete).

FIU Student Planner | ShellHacks 2025 - devpost.com/software/fiu-panther-planner

September 2025

- Chrome extension integrating FastAPI backend, MongoDB database, and Manifest V3 frontend to deliver AI-powered course tracking, schedule building, and campus navigation using the Google Maps API.
- Implemented Google ADK with custom tools for course retrieval, prerequisite validation, and semester planning.

Particle Physics Simulator | izy138.github.io/ParticleSim

June 2025

- Engineered a real-time particle physics simulator in JavaScript and with HTML/CSS, leveraging WebGPU for high-performance rendering and user interaction.
- Developed an optimized render and compute pipeline to simulate thousands of particles.

Intelligent Notes | Demo at 10:50 – youtu.be/hVVNb0Lfw4I

March 2025

- Developed a note taking app with search, real-time editing, and a tag-based labeling system using JavaFX.
- Integrated Claude API to generate summaries of notes and folders. Led a team of four to design the application, manage project milestones, and meet deadlines.
